Trimate

High Quality Certified Organic Liquid Humate.

Premier source of organic matter containing up to 67% carbon, Fulvic and Humic acids.

Trimate is our unique liquid humate that contains the three main ingredients of humate: Carbon, Fulvic and Humic. As well as feeding beneficial organisms in the soil, Trimate

reduces the amount of water required for crop production.

Trimate is a ready to use liquid humate product, being a premier source of organic matter containing up to 67% carbon, Fulvic and Humic acids. This high quality product is derived from our Australian humate using a process based on methodology from Russia, where the benefits of humates were first noticed.

Most liquid humates products are acid extracted using a chemical process - ours is a totally natural and environmentally friendly process which is why it is *Bio-Gro registered* - Reg. No. 4769.

Trimate can be mixed with dry fertilisers or liquid fertilisers for spraying straight onto the underside of foliage, where absorption takes place but we primarily recommend it as a foliar spray by itself for improving the health and growth of plants.

Apply as a ground spread at 10 - 20 litres per hectare, up to 5 times per season.

Available in 20, 200 and 1000 Litres.
