FULVIC ACID

FULVIC ACID 3% WITH HUMIC ACID

GENERAL INFORMATION:

It can be applied as soil and/or foliar applications for all crops.

DIRECTIONS FOR USE:

SHAKE WELL BEFORE USING

Foliar Application:

First Application: Apply 1-2 liters/ hectare with at least 100 litre of water or fertilizer solution.
Afterwards: 500mls to 1000 mls /ha with at least 100 ltr of water or fertiliser solution.

Soil Application:

3-5 liters/hectare with enough water or fertilizer solution to cover the area.

BENEFITS

- Stimulates plant enzymes
- Increases root respiration & formation
- Increases germination and viability of seed.
- Stimulates root growth, especially lengthwise
- Promotes the conversion of a number of elements into forms available to plants
- Improves soil workability
- Increases aeration of soil
- Increases water holding capacity
- Retains water soluble inorganic fertilizers in the root zones and releases them to plants when needed, improving soil CEC.

Fulvic acid is the most plant-active of the humic acid compounds. It's a plant growth stimulator that normally contains at least 70 minerals and trace elements⁽¹⁾ and increases plant metabolism and nutrient intake. It is naturally created in soil by composting and can rejuvenate soil. Fulvic acid is an excellent supplement to fertilizers to improve nutrient absorption.

Mixing Instructions

1. **Put 1/3 of water in tank.**
2. **Add other chemicals, if any.**
3. **Add correct amount of fertiliser.**
4. **Fill tank with balance of water.**
5. **Agitate adequately to mix.**
6. **All analysis w/v.**
7. **Shake well before use.**

Check compatibility with orthophosphate, high potash suspension, and chemical mixtures. Keep from freezing.
